# ***THE UNITED NATIONS IN THE US:***

## **Part 4- Digital Takeover**

THE PLAN FOR ENSLAVING  
HUMANITY IN OPEN-AIR, DIGITAL  
PRISONS USING STOLEN DATA  
AND AI INTEGRATION

TAKEOVER

# In Case You Missed it...

Here's what we covered in videos 1-3

# VIDEO: The UN in the US- Part 1

## The Overview

What key treaties, acts and codes have placed the US under UN control.

A comparison between the founding principles of the United States and elements of the UN Charter

The root philosophy UN Governance

An introduction to Agenda 21 and 2030 Overview & Goals

An overview of the lingo and terms that have corrupted meanings and usage for UN goals

Recognizing UN agendas embedded in your state, county or city

Action steps to get the UN out of America .

# VIDEO: The UN in the US- Part 2

## The Tricky Language of the UN Agendas

**Sustainability & Sustainable**

**GLOBALIZATION**

*Carbon Footprint,  
Carbon Zero  
Net Zero*

**GLOBAL  
WARMING**

**Public/Private  
Partnerships**

**IOT & IOB**

Alem Tedeneke, Media Manager, Tel.: +1 646 204 9191, Email: [ated@weforum.org](mailto:ated@weforum.org)

- The UN-Forum Partnership was signed in a meeting held at United Nations headquarters between UN Secretary-General António Guterres and World Economic Founder and Executive Chairman Klaus Schwab to accelerate the implementation of the 2030 Agenda for Sustainable Development
- The partnership identifies six areas of focus – financing the 2030 Agenda, climate change, health, digital cooperation, gender equality and empowerment of women, education and skills – to strengthen and broaden their combined impact by building on existing and new collaborations
- The full partnership framework can be found [here](#)

**New York, USA, 13 June 2019** – The World Economic Forum and the United Nations signed today a Strategic Partnership Framework outlining areas of cooperation to deepen institutional engagement and jointly accelerate the implementation of the 2030 Agenda for Sustainable Development. The framework was drafted based on a mapping of existing collaboration between the two institutions and will enable a more strategic and coordinated approach towards delivering impact.

"How the United Nations is quietly being turned into a public-private partnership", 2 July 2019

...[T]he leadership of the World Economic Forum (WEF) and the United Nations (UN) signed a memorandum of understanding (MOU) to partner with each other... the new WEF-UN agreement creates a second special place for multinational corporations inside the UN... The rather detailed MOU includes forms of cross organizational engagement... [including] commitments that the Secretary-General himself will be invited to deliver a keynote address at the WEF annual Davos gatherings... The scope of each of the five fields for joint attention is narrowed down from the intergovernmentally negotiated and agreed set of goals to one with more in line with the business interests of WEF members. [For example] under financing, the MOU calls only for 'build[ing] a shared understanding of sustainable investing' but not for reducing banking induced instabilities and tax avoidance... All this joint work might have some practical good if it were not for three crucial elements: firstly, the agreement circumvents the intergovernmental review process; secondly, the agreement elevates multistakeholderism as the solution to the problems with the current multilateral system; and thirdly the proposed multistakeholder partnerships are not governed by any formal democratic system... What is surprising is that by accepting this marriage arrangement with the WEF, the Secretary-General of the UN is marginalizing the intergovernmental system in order to 'save' it.

Deeply concerned about corporate capture of the UN system, 289 organizations from all regions of the world, as well as 27 individuals, have endorsed a collective [letter](#) to the United Nations Secretary General, H.E. Mr. António Guterres, to terminate the strategic partnership agreement recently signed by the United Nations and the World Economic Forum. This is a form of corporate capture, which will

seriously undermine the mandate of the UN as well as the independence, impartiality and effectiveness of this multilateral body, particularly in relation to the protection and promotion of human rights. The signatories instead call for “strengthening peoples’ sovereignty, deepening democratic multilateralism,” emphasizing the vital role of social movements and civil society organizations “in upholding human rights and environmental agreements and in the development of intergovernmental positions on a wide range of global crises over the past 75 years.” This letter was also sent to the President of the UN General Assembly and the Chair of the Group of 77 requesting their support for termination of the agreement and in disseminating this letter to member States.

Benjamin Franklin was the first to deploy street lighting. He put candles in a four-sided, glass case for his lights. The engineering took a giant leap forward in England, when William Murdoch lit his home with coal

gas lights in 1792.

Today street lighting is taken as a given, like waterborne sewage. But it's also one of the building blocks for the cities of the future, known as "smart cities."

# IMPORTANT HISTORICAL EVENTS

A Columbia University group had the idea of introducing energy as a new currency.

1932

John McCarthy invented the term Artificial Intelligence

1950

Insiders w/in the Kennedy Administration unearthed the old idea of using war to keep the people under control. they created a twist on that idea to create massive, worldwide pollution and then blame the citizens of the world for the mess - and make them clear it up

1961

Formation of the Club of Rome

1968

Formation of the World Economic Forum

1971

The UN decided to take control of the world's land and to control the world's population

1976

First mention of Sustainable Development

1980

## INTRODUCTION

Term-"Climate Change"  
Introduced

1990- ICLEI was founded

1991 -the Club of Rome, came  
up with global warming

1992-**Agenda 21** Introduced

1992 UN "Earth Summit" in Rio  
de Janeiro

1993 President Bill Clinton EO  
No. 12852, "President's Council  
on Sustainable Development,"

1993, Clinton introduced the  
"Health Security Act" (HR 3600

1997- More than 1800 local  
governments in 64 countries  
formed

1997, COP-3) passed the Kyoto  
Protocol, targets

**1989**

## INDOCTRINATION

2005- Mayors Green Accord

2011- "Industry 4.0" coined by  
Acatech Intended as a way to  
describe industrial  
"digitization,"

2007, (COP-13) Bali Action Plan  
was implemented

2009, the Copenhagen Accord  
was created at (COP-15)- goal  
to keep global warming below  
two degrees Celsius

2013, Obama created the  
Climate Action Plan, aimed to  
cut 32% of carbon emissions  
from electrical power plants

**2005**

## IMPLEMENTATION

2015-The Paris Agreement was  
adopted at (COP-21) and  
addressed greenhouse-gas-  
emissions mitigation,  
adaptation, and finance.

2015-Sustainable  
Development Summit  
Agenda 2030 was introduced

2015- Smart Cities Challenge-  
USDOT

2017- ID2020

2019, the UN and the WEF  
signed a "strategic partnership  
for a sustainable development  
agenda," = the Great Reset

**2015**

# Noah Harari- Lead Consultant for Klaus Schwab and the WEF

Yuval Noah Harari is a lead consultant for Klaus Schwab. Klaus Schwab is the author of the COVID-19: The Great Reset and the founder of the World Economic Forum. Harari is praised by the likes of Klaus Schwab, Barack Obama, Mark Zuckerberg, and Bill Gates, who reviewed Harari's latest book on the cover of the New York Times Book Review. Harari speaks at the World Economic Forum at Davos, New York Times, Stanford, TED, and TimesTalks. At the time of this writing, his books occupied the top two slots on the New York Times' nonfiction best-seller list.

**"If we succeed, we could be beyond the God of the bible."**

A futuristic digital cityscape with glowing blue and green lights, data lines, and a central glowing cube. The scene is split diagonally by a white line.

# **ELEMENTS OF A DIGITAL TAKEOVER**

# DIGITAL PANOPTICON

The design of the panopticon allows all prisoners to be observed by a single security guard, without the inmates being able to tell whether they are being watched.

The digital panopticon idea centers around all the element of the digital takeover being the "security guard" keeping watch over and imprisoning everyone.

## ARTIFICIAL INTELLIGENCE

A set of advanced technologies that enable machines to grasp and understand human intelligence, learn to imitate it, and act accordingly. There are two forms of AI:

- **STRONG AI**

This form of AI is also called Artificial General Intelligence (AGI). It is capable of performing all the intellectual tasks that a human being can perform, and more.

- **WEAK AI**

The focus of the so-called non-sentient artificial intelligence is on narrowly defined tasks such as image recognition or route planning.

- **MACHINE LEARNING**

A part of AI that equips systems with the ability to learn from experience without being explicitly programmed to do so.

- **DEEP LEARNING**

A subset of machine learning that uses artificial neural networks to classify information similar to the human brain.

- **UNSUPERVISED LEARNING**

Machine learning algorithms used for unmarked data.

- **SUPERVISED LEARNING**

Machine learning algorithms that access marked training data.

**"The fourth Industrial revolution is characterized by a fusion of technologies that is *blurring the lines between the physical, digital, and biological spheres, with rising emerging technologies,* as real AI, Narrow AI/ML/DL, robotics, automation, materials science, energy storage, the Internet of Things, autonomous vehicles, 3-D printing, nanotechnology, biotechnology, neurotechnology, cognitive technology, and quantum computing.**

**It implies radical disruptions to everything, industries, jobs, works, technologies, and old human conditions. In its scale, scope, complexity, and impact, the AI transformation will be unlike anything humankind has experienced before."**

# **FACIAL RECOGNITION**

**Facial recognition is a way of identifying or confirming an individual's identity using their face. Facial recognition systems can be used to identify people in photos, videos, or in real-time.**

***Facial recognition is a category of biometric security.***

**Other forms of biometric software include voice recognition, fingerprint recognition, and eye retina or iris recognition. The technology is mostly used for security and law enforcement, though there is increasing interest in other areas of use.**

# What is Facial Recognition Used for?

- **Unlocking phones**
- **Law enforcement**
- **Airports and border control**
- **Finding missing persons**
- **Reducing retail crime**
- **Improving retail experiences**
- **Banking**
- **Marketing and advertising**
- **Healthcare**
- **Tracking student or worker attendance**
- **Recognizing drivers**
- **Monitoring gambling addictions**

# THE DIGITAL TAKEOVER IS BIG BUSINESS

These latest innovative and non-intrusive technologies have made life simpler and exciting. Face recognition technology has grown into a fast-developing technology. **In 2020, the facial recognition market was valued at \$3.8 billion, and the same is slated to double in size by 2025 – forecasted to be over \$8.5 billion.**

PUBLISHED JULY 15, 2020

**Thorin Klosowski**

Share this post

Facial recognition—the software that maps, analyzes, and then confirms the identity of a face in a photograph or video—is one of the most powerful surveillance tools ever made. While many people interact with facial recognition merely as a way to unlock their phones or sort their photos, how companies and governments use it will have a far greater impact on people’s lives.

# **CAMERAS & SURVEILLANCE**

[About](#) [Issues](#) [Our work](#) [News](#) [Take action](#)

# WHAT'S WRONG WITH PUBLIC VIDEO SURVEILLANCE?

*Published March 2002*

**The Four Problems With Public Video Surveillance**

# WHAT'S WRONG WITH PUBLIC VIDEO SURVEILLANCE (from The ACLU 2002)?

1. VIDEO SURVEILLANCE HAS NOT BEEN PROVEN EFFECTIVE

2. CCTV IS SUSCEPTIBLE TO ABUSE

- Criminal Abuse
- Institutional Abuse
- Personal Purposes Abuse
- Discriminatory Targeting
- Voyeurism

3. THE LACK OF LIMITS OR CONTROLS ON CAMERAS USE

- Legally enforceable rules for the operation of such systems.

4. VIDEO SURVEILLANCE WILL HAVE A CHILLING EFFECT ON PUBLIC LIFE

**THE BOTTOM LINE: A LACK OF PROPORTION BETWEEN BENEFITS AND RISKS**

**Like any intrusive technology, the benefits of deploying public video cameras must be balanced against the costs and dangers. This technology (a) has the potential change the core experience of going out in public in America because of its chilling effect on citizens, (b) carries very real dangers of abuse and "mission creep," and (c) would not significantly protect us against terrorism. Given that, its benefits - preventing at most a few street crimes, and probably none - are disproportionately small.**

If you live in America and drive a car, chances are your photograph is part of a database of face images that can be accessed by the FBI. By tapping into state driver's license databases, plus the State Department's passport and visa photos, the FBI has steadily expanded its collection to include more than 640 million face images, according to the U.S. Government Accountability Office.

The FBI's Next Generation Identification database, or NextGen, contains millions of biometric identifiers, including more than 30 million civil and criminal mug shots. These "faceprints" are based on certain markers, such as the distance between pupils and nostrils, that are almost impossible to change or disguise.

ARTICLE CONTINUES AFTER ADVERTISEMENT

Private companies such as Clearview AI are part of the trend as well, combing popular social media platforms to amass up to three billion face images, and then passing those images along to paying customers, including government agencies. Whether we realize it or not, our faceprints have become a hot commodity.

# LED Incapacitator

Puke ray

In 2017, the city of San Diego began installing around 3,000 sensors and hidden cameras into streetlights. The so-called "smart streetlights" were originally approved as an initiative to monitor and mitigate traffic, but quietly became a crime-solving tool for local police and faced public outcry from privacy-concerned residents.

Now, what began with local opposition to the controversial technology is driving an effort that could give the city one of the strongest sets of local privacy regulations in the country.

Last week, the San Diego city council unanimously passed two privacy ordinances aimed at providing transparency into the use of surveillance tech by police. The measures were created by members of the Transparent and Responsible Use of Surveillance Technology San Diego (TRUST SD) coalition, and were heavily inspired by surveillance ordinances passed in Oakland, CA last year.

# Key Mobile App Statistics for 2022

- Mobile apps are expected to generate over **\$935 billion** in revenue by 2023.
- • The Apple App Store has **1.96 million apps** available for download.
- • There are **2.87 million apps** available for download on the Google Play Store.
- **21% of Millennials** open an app 50+ times per day.
- **49%** of people open an app **11+ times each day**.
- **70%** of all **US digital media time** comes from mobile apps.
- The **average smartphone owner** uses 10 apps per day and 30 apps each month.

# APP DOWNLOADS in BILLIONS

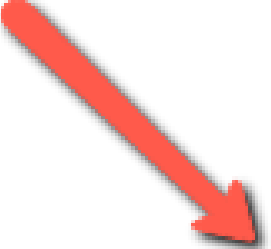

personal data than alternative apps.

Social media apps – again, unsurprisingly – turned out to be the type of app which collect the most data, but so do food delivery apps. Image editing and web browsers tend to be best for privacy, because they don't ask for personal info.

The three apps which collect the most data are all owned by Facebook:

1. Messenger
2. Facebook
3. Instagram And here's the rest of the top 10:
4. Line
5. PayPal
6. Amazon Shopping
7. LinkedIn
8. DoorDash
9. Caviar
10. Wish

It's not just your name, email address and other obvious stuff that apps collect. It can be as wide ranging as recording your financial information, health and fitness, browsing and search history, items you purchase, your location, your list of contacts and other sensitive information.

In some cases, this data is sold to third parties who can build up a clear profile of you and use it for various purposes, including to advertise products you're more likely to be interested in buying.

# **"CONVENIENCE & SECURITY"**

# The Convenience & Security Trap

"In Atlanta, Delta has an entire "biometric terminal" that uses your face at check in, bag drop, security and boarding. It says the scans help board international flights nine minutes faster, saving two seconds per passenger.

This has all the makings of a convenience trap. That's how privacy-invading technology – the stuff of China's police state – creeps into American life. Mostly in the name of efficiency, airlines and the U.S. government are, at a large scale, scanning the faces of people who aren't suspected of crimes. **It's America's biggest step yet to normalize treating our faces as data that can be stored, tracked and, inevitably, stolen."**

# Why we surrender privacy: Convenience & Pleasure

"The simplest, near-term argument is that we 'willingly' share personal information with apps and websites in exchange for convenience. This convenience is not just about asking digital assistants to play music or sharing a file; it is much more about broader objectives of increasing productivity, enhancing the 'efficiency' and speed of tasks and 'being on top'.

We allow Google to 'machine read' our documents and scan our photographs in exchange for free services like cloud storage and easy sharing. Convenience drives the entry of digital assistants who can hear all our conversations—like Alexa, Google Assistant, and Siri—into our homes because we can ask them to play music or operate gadgets through voice commands.

An all-encompassing form of convenience is provided by a microchip implant under the skin, in Sweden. These chips 'speed up' daily lives because users can access their homes and offices merely by swiping their hands against digital readers."

DIGITAL IDENTITY

# **A billion people have no legal identity - but a new app plans to change that**

Nov 20, 2020

## A UN goal

Ensuring everyone has a legal identity, including birth registration, by 2030 is one of the United Nations' [Sustainable Development Goals \(SDGs\)](#). It prompted the World Bank to launch its [Identification for Development \(ID4D\)](#) initiative in 2014.

The latest data from the Bank shows there are just over 987 million people in the world who have no legal identity, [down from 1.5 billion in 2016](#). The majority live in low-income countries where [almost 45% of women](#) and 28% of men lack a legal ID.

For [the almost 80 million people forced to flee](#) their homes by war or persecution last year, the situation is even worse. Identity documents are often lost in the confusion and yet they can be vital to the success of their claim for refugee status.

# ‘Paving a Digital Road to Hell’: Digital ID Systems Could Lead to Severe, Irreversible Human Rights Violations

*The authors of a New York University’s Center for Human Rights and Global Justice report on digital identity systems warned of “severe and potentially irreversible” human rights violations and argued for open debate “with full transparency and involving all relevant stakeholders.”*

## ADVANCED AND PERVASIVE BIOMETRIC SURVEILLANCE ALLOWS NEW FORMS OF SOCIAL CONTROL

Biometrics are already making exponential advances—technologies that were recently in the realm of science fiction now shape the reality of billions of people's lives. Facial recognition,

gait analysis, digital assistants, affective computing, microchipping, digital lip reading, fingerprint sensors—as these and other technologies proliferate, we move into a world in which everything

about us is captured, stored and subjected to artificial intelligence (AI) algorithms.

This makes possible increasingly individualized public and private services, but also new forms of

This makes possible increasingly individualized public and private services, but also new forms of conformity and micro-targeted persuasion. If humans are increasingly replaced by machines in crucial decision loops, the result may lead not only to greater efficiency but also to greater societal rigidity.

Global politics will be affected: authoritarianism is easier in a world of total visibility and traceability, while democracy may turn out to be more difficult — many societies are already struggling to balance threats to privacy, trust and autonomy against promises of increased security, efficiency and novelty. Geopolitically, the future may hinge in part on how societies with different values treat new reservoirs of data

# SMART CITIES SMART DEVICES

<https://www.youtube.com/watch?v=1t12UqYl5SA>

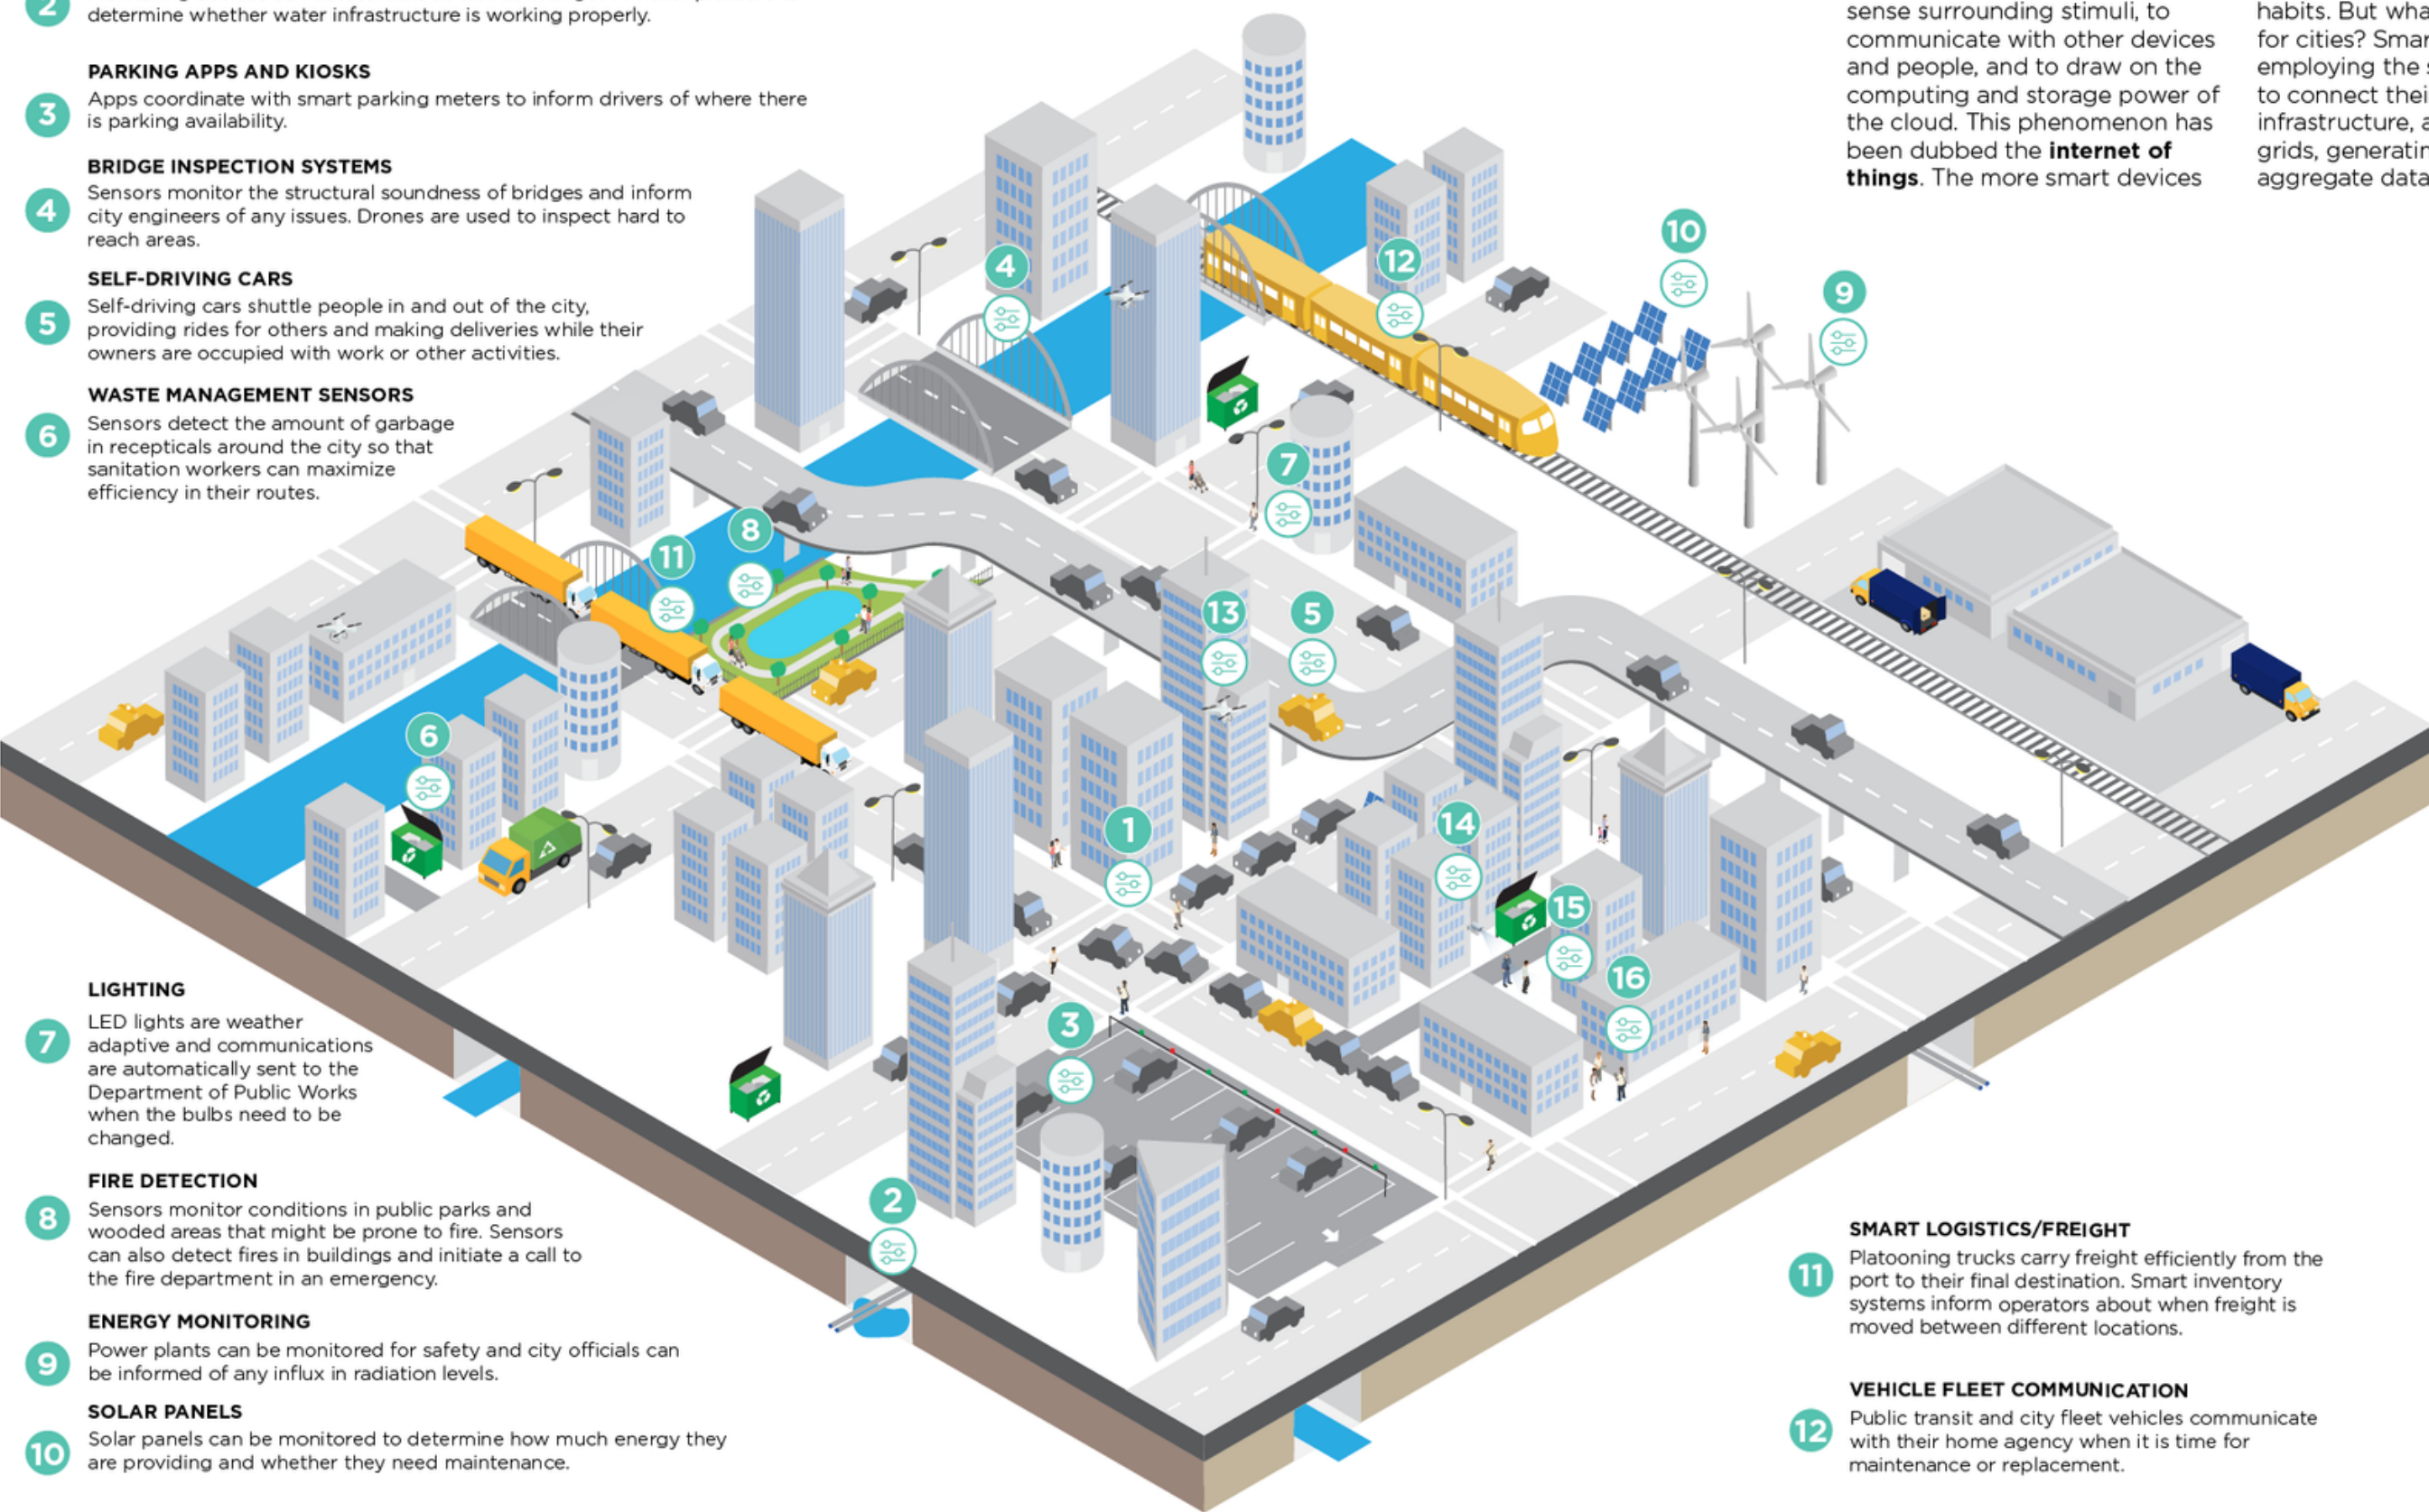

# INTERNET OF THINGS IN CONNECTED CITIES

Every consumer product and piece of infrastructure increasingly has the ability to sense surrounding stimuli, to communicate with other devices and people, and to draw on the computing and storage power of the cloud. This phenomenon has been dubbed the **internet of things**. The more smart devices and sharing platforms there are, the more data is generated about consumer's preferences and habits. But what does this mean for cities? Smart cities are employing the same technology to connect their disparate utility, infrastructure, and public service grids, generating real-time aggregate data. This, in turn, can help cities manage their programs and services more effectively and gauge their impact immediately. The city of the future is an interconnected one, where devices communicate with one another in a constant stream of data that provides real-time information to the public and to the municipality.

- 1 TRANSPORTATION CONGESTION SENSORS**  
Smart transportation systems use sensors to detect congestion and bottlenecks in traffic patterns. They also rely on cameras to enforce speed and traffic infractions. In doing so, these tools gather real time information that can be used by city DOTs to make mobility networks safer and more efficient.
- 2 WATER AND WASTEWATER MONITORING**  
Monitoring devices can detect leaks as well as changes in water pressure to determine whether water infrastructure is working properly.
- 3 PARKING APPS AND KIOSKS**  
Apps coordinate with smart parking meters to inform drivers of where there is parking availability.
- 4 BRIDGE INSPECTION SYSTEMS**  
Sensors monitor the structural soundness of bridges and inform city engineers of any issues. Drones are used to inspect hard to reach areas.
- 5 SELF-DRIVING CARS**  
Self-driving cars shuttle people in and out of the city, providing rides for others and making deliveries while their owners are occupied with work or other activities.
- 6 WASTE MANAGEMENT SENSORS**  
Sensors detect the amount of garbage in recepticals around the city so that sanitation workers can maximize efficiency in their routes.
- 7 LIGHTING**  
LED lights are weather adaptive and communications are automatically sent to the Department of Public Works when the bulbs need to be changed.
- 8 FIRE DETECTION**  
Sensors monitor conditions in public parks and wooded areas that might be prone to fire. Sensors can also detect fires in buildings and initiate a call to the fire department in an emergency.
- 9 ENERGY MONITORING**  
Power plants can be monitored for safety and city officials can be informed of any influx in radiation levels.
- 10 SOLAR PANELS**  
Solar panels can be monitored to determine how much energy they are providing and whether they need maintenance.

- 11 SMART LOGISTICS/FREIGHT**  
Platooning trucks carry freight efficiently from the port to their final destination. Smart inventory systems inform operators about when freight is moved between different locations.
- 12 VEHICLE FLEET COMMUNICATION**  
Public transit and city fleet vehicles communicate with their home agency when it is time for maintenance or replacement.

- 13 DRONES**  
Drones can be used for law enforcement and firefighting, as rural ambulances, for infrastructure inspections, and for environmental monitoring. Commercial uses include precision farming, aerial photography, and in the near future, package delivery.
- 14 SURVEILLANCE CAMERAS**  
Cameras ensure security by monitoring activity in areas that are not frequented by public safety officers. Areas that are not open to public access can be monitored to keep unauthorized personnel out.
- 15 BODY CAMERAS**  
Public safety officers can wear body cameras that capture footage of interactions between themselves and city residents to ensure safety for both parties.
- 16 WEARABLE DETECTION**  
Cities can build in smartphone and wearable detection sensors so that people can be an active part of the internet ecosystem, communicating with the city, and with each other.
- 17 BROADBAND INFRASTRUCTURE**  
A reliable internet ecosystem is the glue that holds the internet of things together.

# SMART METER WARNING

The background features a diagonal split between a light grey and white area. On the left, there are three overlapping circular elements with a gold-colored outer ring and a grey inner section containing a white circuit board pattern. On the right, there is a single similar circular element, partially cut off by the edge of the frame.

**CENTRAL BANK  
DIGITAL  
CURRENCY  
(CBDCs)**

# WHAT ARE CENTRAL BANK DIGITAL CURRENCIES? (CBDCs)

Central bank digital currencies are digital tokens, similar to cryptocurrency, issued by a central bank. They are pegged to the value of that country's fiat currency.

Many countries are developing CBDCs, and some have even implemented them. Because so many countries are researching ways to transition to digital currencies, it's important to understand what they are and what they mean for society.

# WHY CENTRAL BANKS WOULD ISSUE THEM?

1.

Financial Stability

2.

Payment Efficiency

3.

Payment Safety

4.

Antitrust

5.

Financial Inclusion

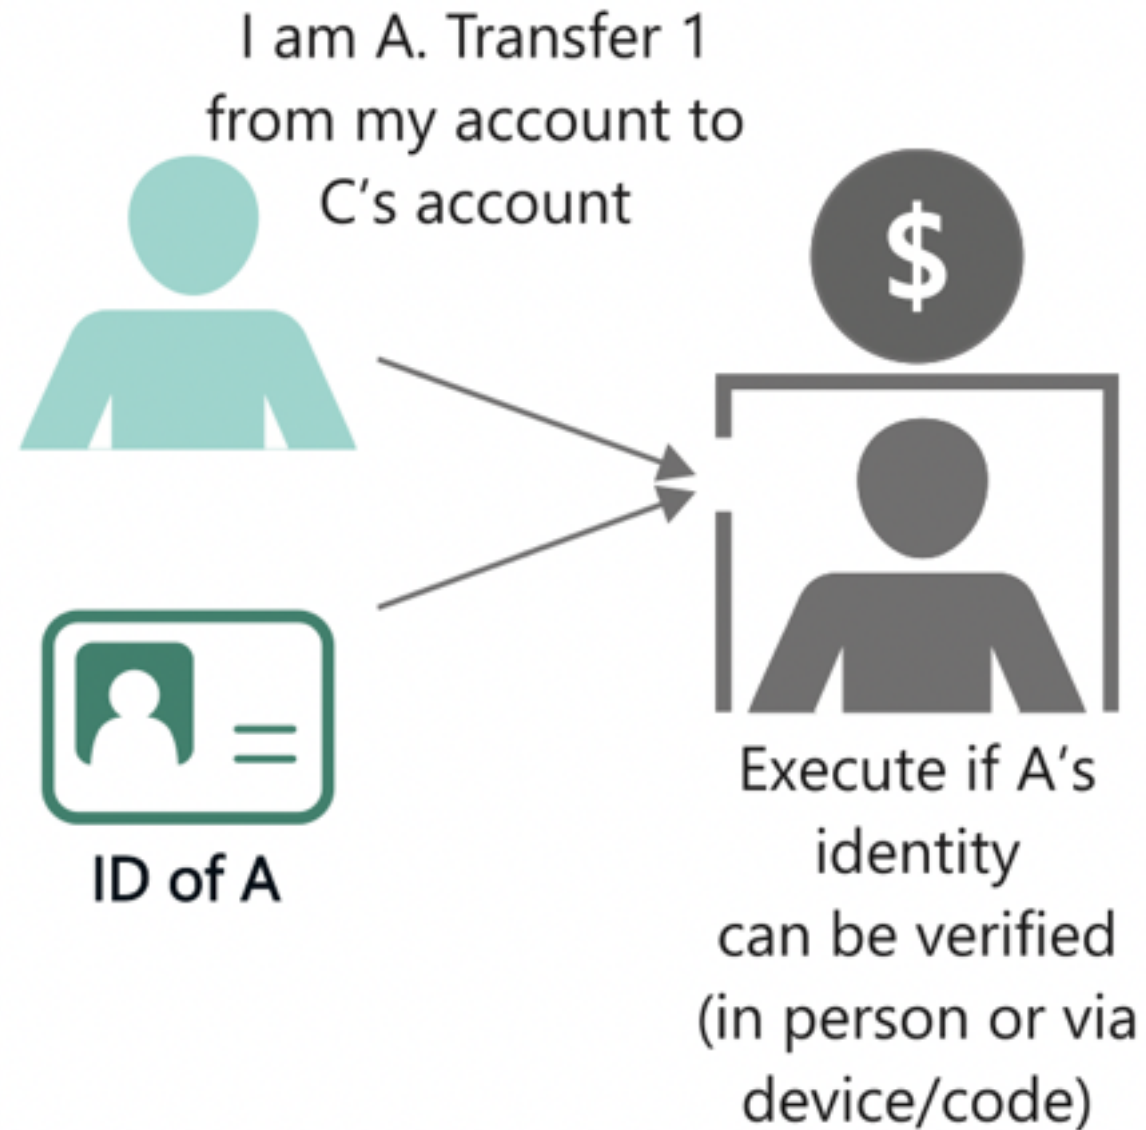

6.

Monetary Policy Implementation

# WHY CENTRAL BANKS WOULD ISSUE THEM?

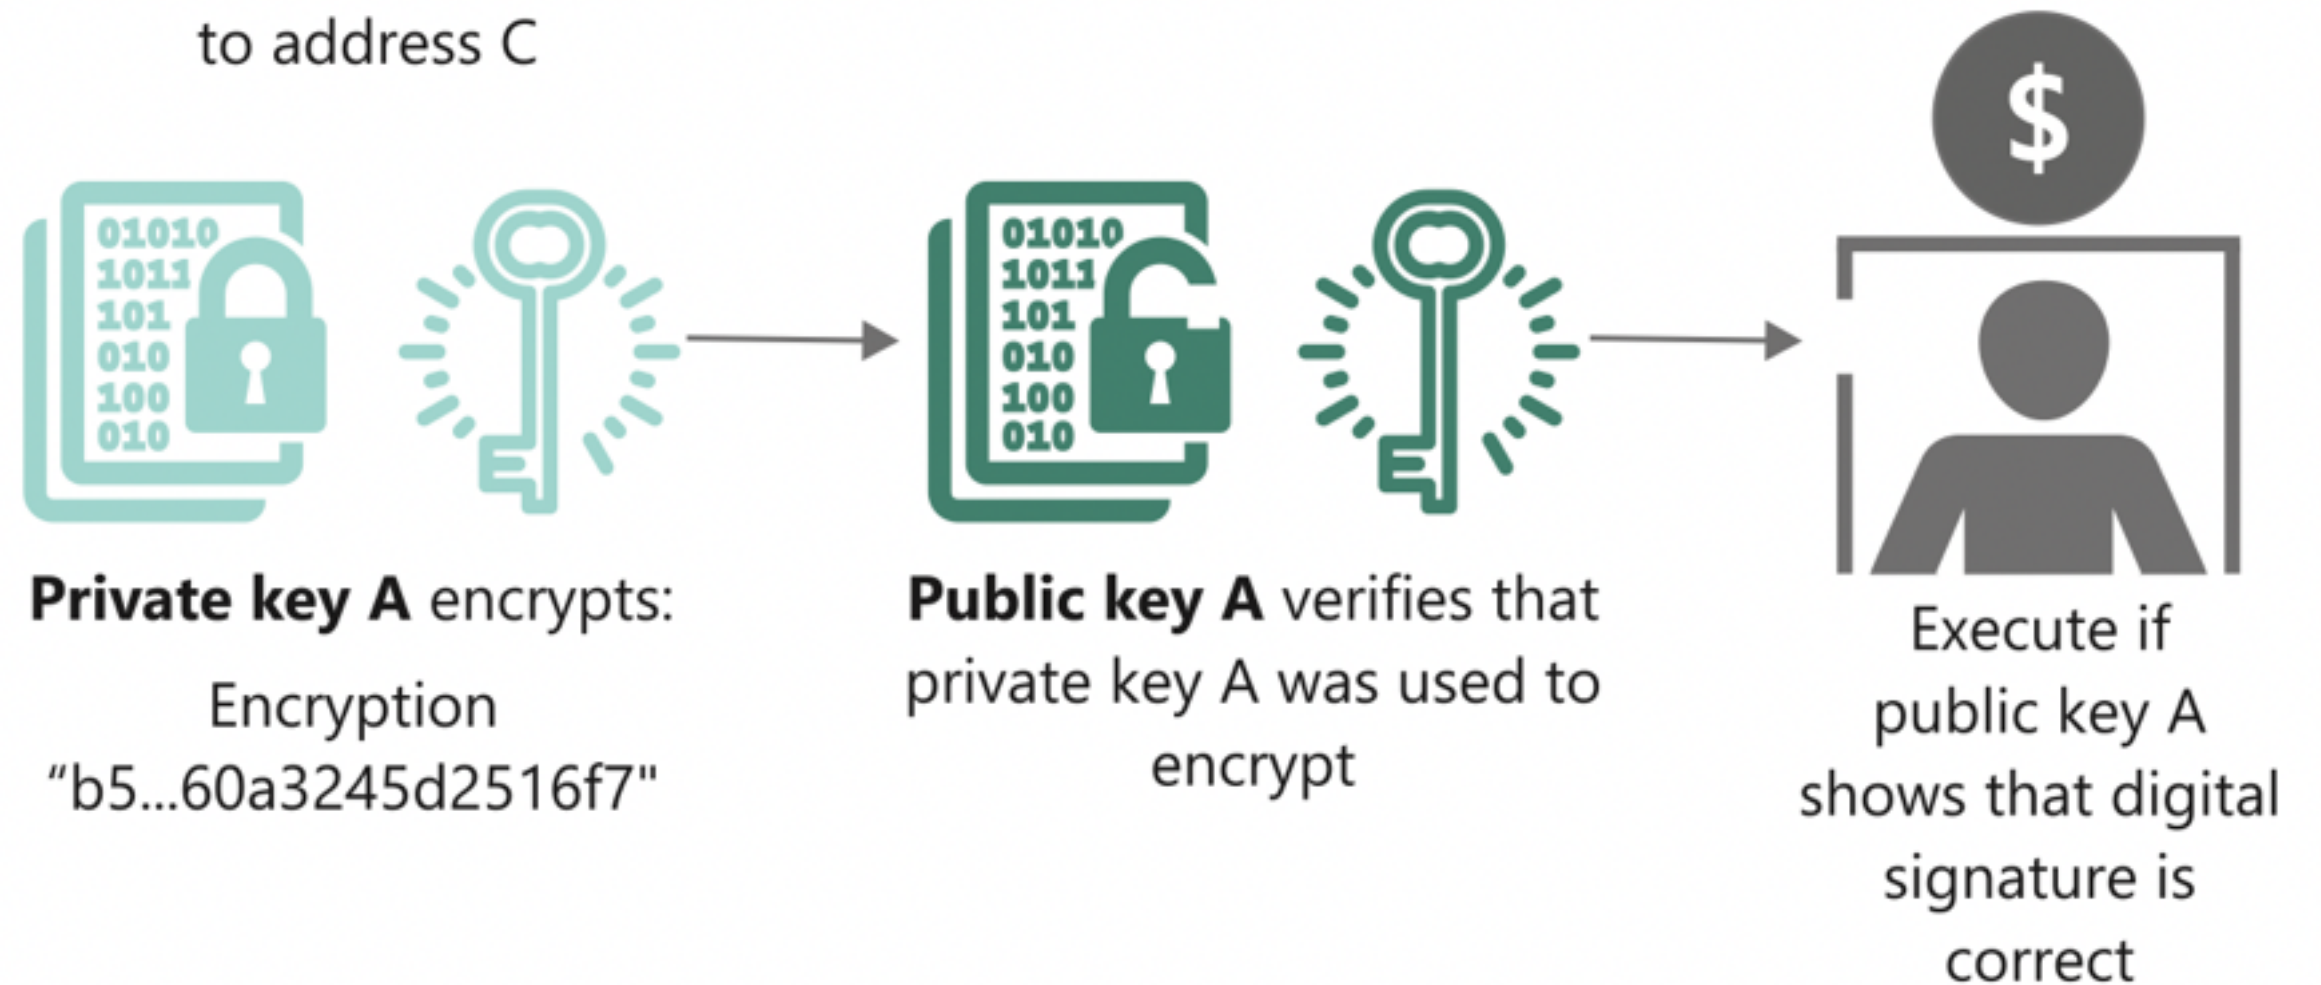

The main goal of CBDCs is to provide businesses and consumers with privacy, transferability, convenience, accessibility, and financial security. CBDCs could also decrease the maintenance a complex financial system requires, reduce cross-border transaction costs, and provide those who currently use alternative money transfer methods with lower-cost options.

### Accounts: "I am, therefore I own"

### Digital tokens: "I know, therefore I own"

Transfer 1 from address A to address C

In an account-based CBDC, ownership is tied to an identity and transactions authorized via ID.

In a CBDC based on digital tokens, claims are honored based solely on the demonstrated knowledge, such as digital signature.

# RISKS OF CBDCs

① The key economic risk is inflation. A CBDC can be created at the press of a button and distributed widely, inflating the money supply without any corresponding increase in GDP. Alas, since governments control central banks, this risk can never really be mitigated .. governments can always find ways to create money to spend – with CBDCs the temptation to do this will only increase.

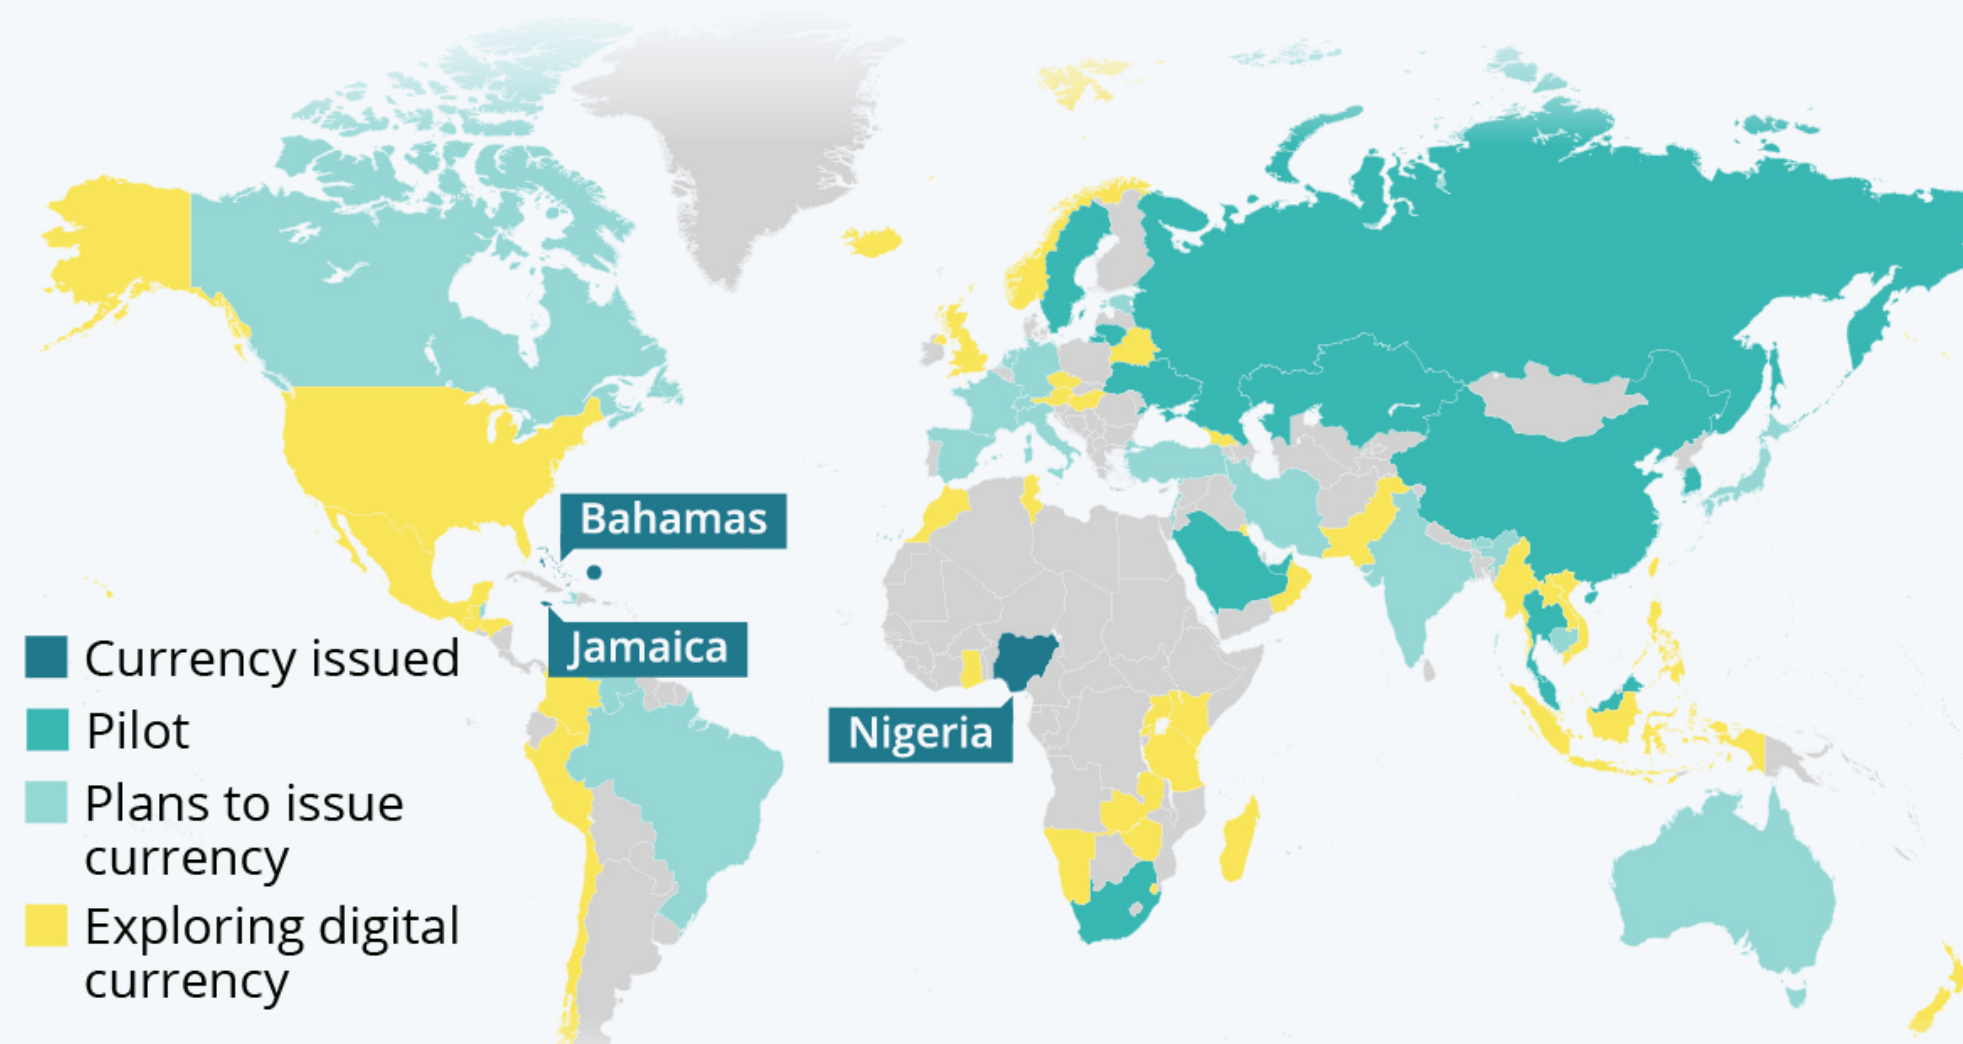

# RISKS OF CBDCs

- ② Financial risks include exchange rate risk, higher lending costs and operational risks.
- ③ Human Rights Risks- If designed inappropriately, CBDCs have the potential to be used as tools of surveillance and control by governments. Every transaction is recordable and any authority with access to the CBDC ledger could see all transactions.

# Where Central Banks Have Issued Digital Currencies

Central Bank digital currencies launched, under development or considered around the world

Caribbean nations/territories with official digital currency: Bahamas, Jamaica, Dominica, Grenada, St. Vincent, St. Lucia, Montserrat, St. Kitts, Antigua and Barbuda

# SOCIAL CREDIT SCORES

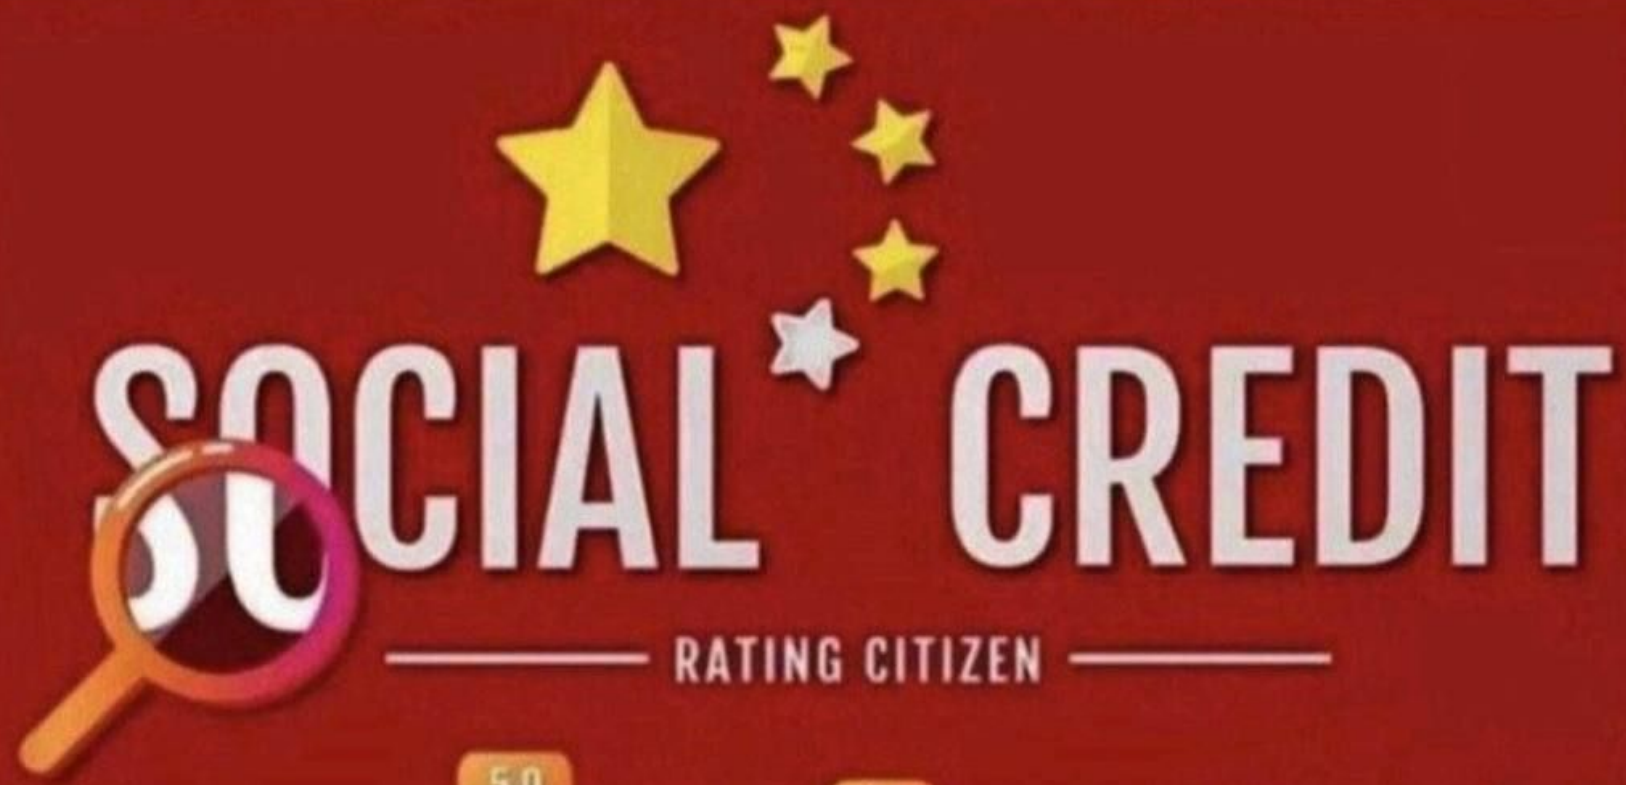

# What is a Social Credit Score?

Much like what we have for our financial credit ratings, China's "social credit" system attaches a positive point value to behavior that the government views as praiseworthy (showing integrity, responsibility and/or trustworthiness) and a negative point value for behavior it wants to discourage.

"Bad" behavior includes spending too much time playing video games, not caring for aging parents, poor driving, jaywalking, not paying one's debts and, of course, criticizing the government.

The graphic features a dark red background. At the top center is a large yellow star, with four smaller yellow stars and one white star arranged in an arc to its right. Below this, the words "SOCIAL CREDIT" are written in large, white, bold, sans-serif capital letters. A magnifying glass with a brown handle and a pinkish-red frame is positioned over the letter 'O' in "SOCIAL". Underneath "SOCIAL CREDIT", the words "RATING CITIZEN" are written in a smaller, white, sans-serif font, flanked by two horizontal white lines.

# SOCIAL CREDIT

RATING CITIZEN

**THE PANDEMIC IS TO FORCE YOU TO GET THE VACCINE. THE VACCINE IS TO FORCE YOU TO GET THE VACCINE PASSPORT. THE PASSPORT IS TO FORCE YOU TO GET THE SOCIAL CREDIT. THE SOCIAL CREDIT SCORE IS TO FORCE YOU TO OBEY THE GOVERNMENT. THE GOVERNMENT CAN NOW DENY YOU FOOD, MEDICINE, ACCESS HOUSING, WORK, TRAVEL, HEALTH CARE...**

## **Would-Be British PM Rishi Sunak's Family Runs A China-Linked, World Economic Forum Partner Company Pushing Digital ID and Social Credit Scores.**

Former finance minister Rishi Sunak, a frontrunner to become Britain's next Prime Minister, has family ties to a technology partner of the World Economic Forum that has advocated for a Chinese Communist Party-style economy with digital identities and currency.

# New Dystopian UK Law Would Give All Social Media Users A 'Truth Score'

BY TYLER DURDEN

MONDAY, JUL 18, 2022 - 01:30 AM

*Authored by Paul Joseph Watson via Summit News.*

In another manifestation of the onerous 'social credit score' system, an amendment to a bill in the UK would mandate all social media users be given a 'truth score' that pre-determines the accuracy of their posts.

The amendment has been proposed to be added to the already odious 'Online Safety Bill', which would censor "legal but harmful" content, and was introduced by Conservative Party lawmaker John Penrose.

*"Like something out of dystopian fiction, Penrose, the MP for Weston-super-Mare, has proposed that the government forces online platforms to maintain a score of how truthful a person is, determined by their past statements,"* [writes](#) Dan Frieth.

<https://www.zerohedge.com/geopolitical/new-dystopian-uk-law-would-give-all-social-media-users-truth-score>

THE DAVOS AGENDA 2021

# **This new approach to credit scoring is accelerating financial inclusion in emerging economies**

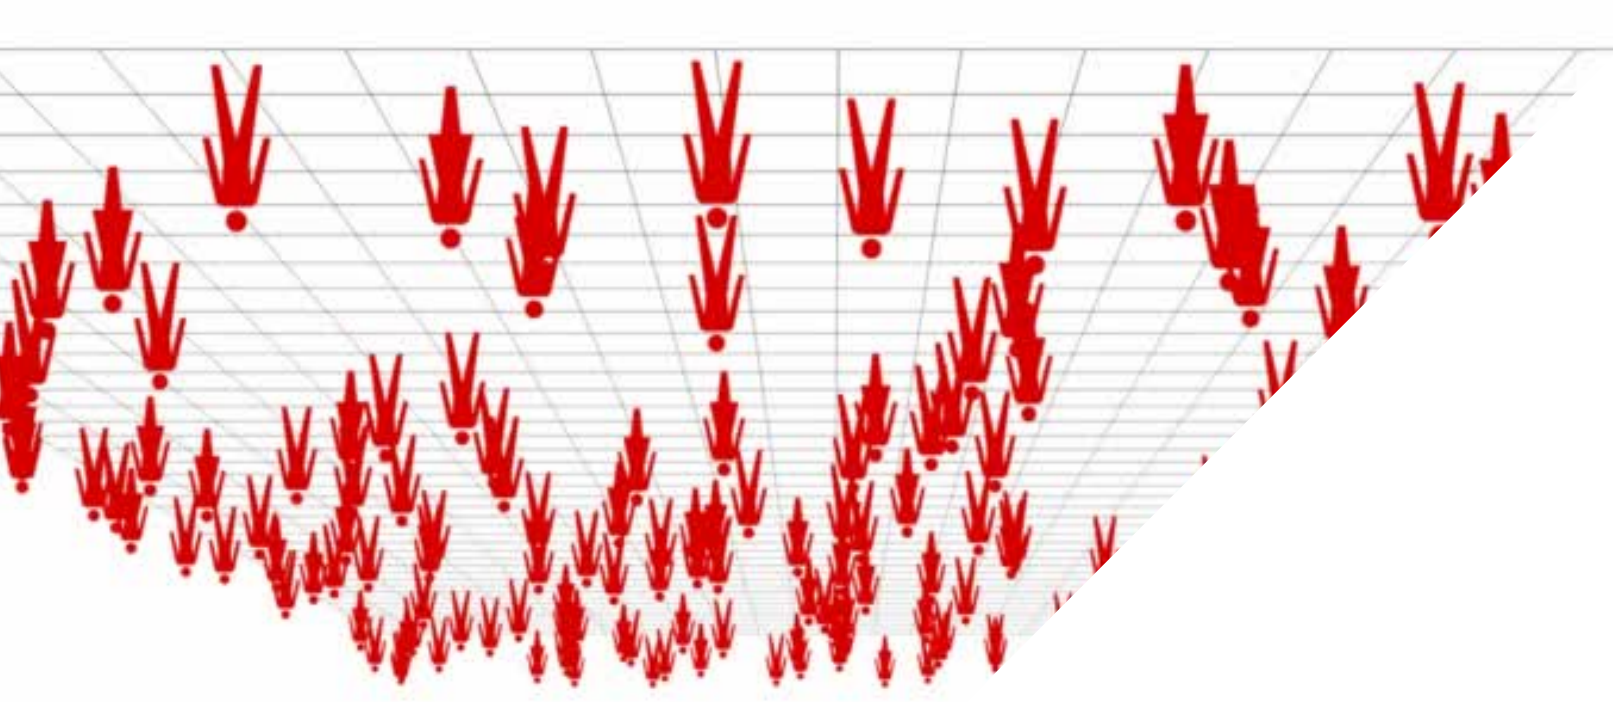

Jan 20, 2021

**NEWS**

# 'Transaction denied': Get ready for credit card that cuts off spending once you hit your CO2 max

---

Doconomy's 'premium' DO Black card goes beyond tracking the CO2 emissions of your purchases — it stops from you spending as soon as you reach your monthly, UN-determined CO2 limit.

# DATA COLLECTION

**PEW RESEARCH CENTER NOVEMBER 15, 2019**

**Americans and Privacy: Concerned, Confused and Feeling Lack of Control Over Their Personal Information**

"A majority of Americans believe their online and offline activities are being tracked and monitored by companies and the government with some regularity. It is such a common condition of modern life that roughly six-in-ten U.S. adults say they do not think it is possible to go through daily life without having data collected about them by companies or the government."

The background features a complex, abstract pattern of overlapping squares and rectangles in various shades of blue (from light cyan to dark navy) and black. This pattern is partially obscured by a large white diagonal shape that runs from the top-left to the bottom-right, creating a central white space where the text is located.

**BLOCKCHAIN**

# WHAT'S THE BIG DEAL ABOUT BLOCKCHAIN?

Blockchain defined: Blockchain is a shared, immutable ledger that facilitates the process of recording transactions and tracking assets in a business network.

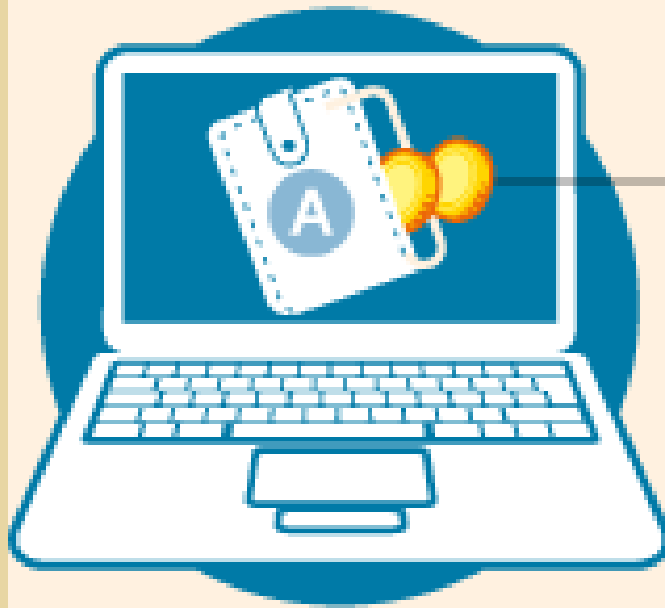

An asset can be tangible (a house, car, cash, land) or intangible (intellectual property, patents, copyrights, branding).

Virtually anything of value can be tracked and traded on a blockchain network, reducing risk and cutting costs for all involved.

# How a blockchain works

1

A wants to send money to B

2

The transaction is represented online as a 'block'

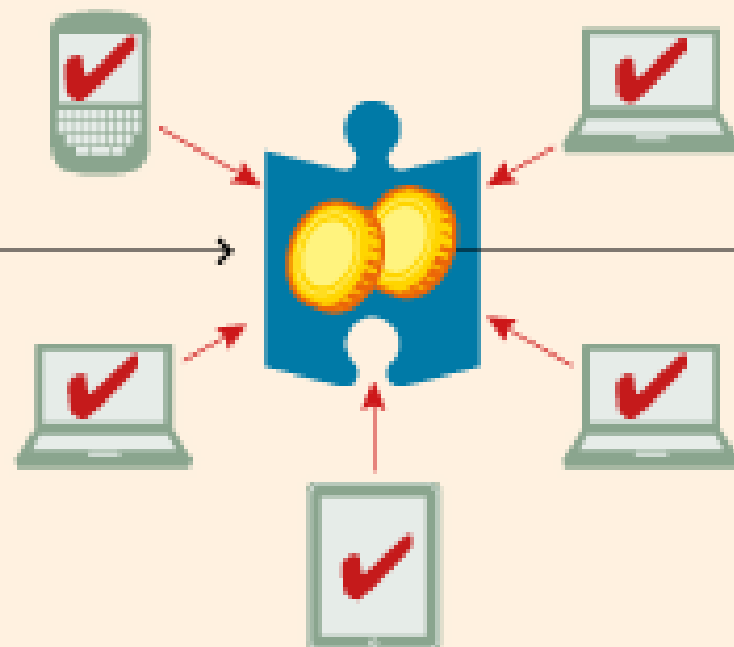

3

The block is broadcast to every party in the network

4

Those in the network approve the transaction is valid

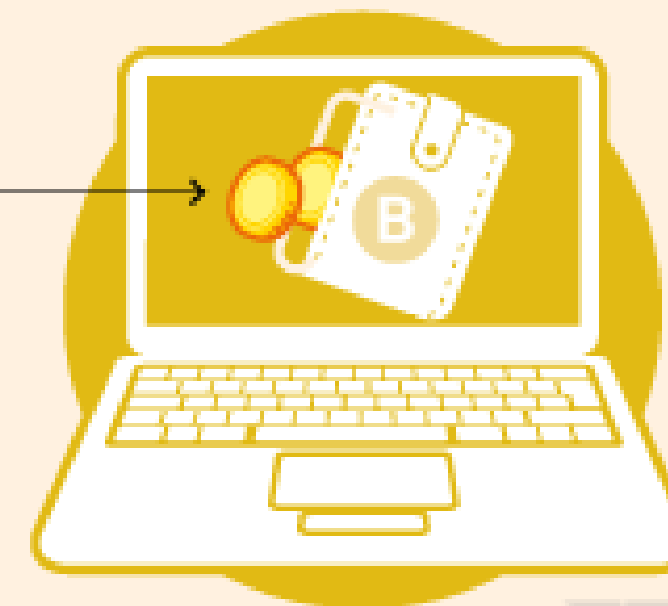

5

The block then can be added to the chain, which provides an indelible and transparent record of transactions

6

The money moves from A to B

**SLOWER PROCESS**  
Blockchain can slow down when there are too many users on the network

**HARDER TO SCALE**  
Blockchains are harder to scale due to their consensus method

**HIGH ENERGY CONSUMPTION**  
Some solutions consume too much energy

**DATA IS IMMUTABLE**  
Blockchain cannot go back as data is immutable

**INEFFICIENT**  
Blockchains are sometimes inefficient due to how they operate

**SELF-MAINTENANCE**  
Users have to maintain their own wallets or else they can lose access

**HIGH COST**  
Blockchain implementation is a costly process

**STILL NOT MATURE**  
It still has a long way to go before it matures and get standardized

**INTEROPERABILITY**  
Blockchain doesn't offer interoperability as of now

**INTEGRATION**  
It's hard to integrate into legacy systems

# Blockchain For Smart Cities

The background features a white central area with two diagonal sections of abstract digital art. The top-left and bottom-right corners are filled with a dark blue background overlaid with a complex network of glowing green and cyan lines and nodes, resembling a data network or molecular structure. Scattered throughout these sections are various numbers in a digital font, such as '42', '291497', '304', '375', '1585', '1353', and 'F292'.

# THE IOT IOB & IOE

# IOT=INTERNET OF THINGS

## What is it exactly?

The IOT is short for, "The Internet of Things" the Internet of Things (IoT) is a concept that aims at establishing and inter-networking of all inanimate objects so as to allow them to communicate with each other without any human intervention.

To put it simply, internet of things is basically the internet for things, where things refer to any and all electronic devices that human use. On the basic level, IoT points to the connection of everyday things to each other and to the internet.

Now you may ask, what is its goal? The answer is - A smoother, more convenient experience for the user.

# IOT=INTERNET OF THINGS

What is it exactly?

THE IOT is integral in making a Smart City functional. All the devices, sensors, the IOB, infrastructure is connected VIA the IOT.

# What is the Internet of Bodies (IoB)?

**RAND defines the IoB as “a growing industry of devices that monitor the human body, collect health and other personal information, and transmit that data over the Internet.”**

**In order to qualify as an IoB device, the technology must: contain software or computing capabilities be able to communicate with an Internet-connected device or network.**

<https://biselliano.info/2022/01/08/the-internet-of-bodies-iob-and-hacking-your-dna-paving-the-journey-toward-transhumanism/>

[https://www.rand.org/pubs/research\\_reports/RR3226.html](https://www.rand.org/pubs/research_reports/RR3226.html)

# **What is the Internet of Bodies (IoB)?**

**An IoB device must also satisfy one or both of the following:**

- collect person-generated health or biometric data**
- be able to alter the human body's function**
- The technology that Hollywood has presented over the years in dystopian sci-fi fantasies is now a reality.**

**In the very near future, the technocratic overlords of science, health, finance, and Big Tech desire humanity to go from wearable devices to devices embedded within our bodies.**

# What is the Internet of Bodies (IoB)?

## 2 critical questions:

**(1) who owns the data collected through IoB devices and technology and (2) how will tech developers and data collectors be regulated?**

**RAND explains:**

**1.No single entity that provides oversight to IoB data...2.Data brokers are largely unregulated, and the 3.United States has no federal data privacy law but relies on state laws which differ greatly.**

**The lack of consistency in IoB laws among states and between the state and federal level potentially enables regulatory gaps and enforcement challenges. As in many areas, rapid advancements in IoB technologies have outpaced the development of policy to address their risks.**

<https://biselliano.info/2022/01/08/the-internet-of-bodies-iob-and-hacking-your-dna-paving-the-journey-toward-transhumanism/>

[https://www.rand.org/pubs/research\\_reports/RR3226.html](https://www.rand.org/pubs/research_reports/RR3226.html)

# The Hierarchy of IOB Devices -Divided into 3 Tiers

- **1st Generation/ (Body External)**: These devices are worn or physically connected to a human body. They collect and transmit data based on physical contact through sensors, computer vision, and so on.
- **2nd Generation/ (Body Internal)**: These devices are placed internally in a human body. They may be ingested or surgically implanted.
- **3rd Generation/ (Body Embedded)**: This is a stage when electronic devices may be completely merged with the human body and functioning together while maintaining a real-time remote connection.

# **The Hierarchy of IOB Devices -Divided into 3 Tiers**

**Here are just a few examples of the technology currently being developed:**

**Augmented reality contact lenses**

**Brain reading and writing devices**

**Body-implanted sensors**

**Clothing with sensors**

**Implantable microchips (RFID and NFC)**

**Mental and emotional sensors**

**Artificial pancreas**

**Bluetooth connected diaper**
