

SUSTAINABLE DEVELOPMENT GOALS

THE UNITED NATIONS IN THE US:

Part 3-SDGS-IN REALITY

THE MECHANISMS DESIGNED TO FOR TOTALITARIAN TRANSFORMATION & CONTROL OF THE WORLD

"The common enemy of humanity is man.

In searching for a new enemy to unite us, we came up with the idea that pollution, the threat of global warming, water shortages, famine and the like would fit the bill. All these dangers are caused by human intervention, and it is only through changed attitudes and behavior that they can be overcome.

The real enemy then, is humanity itself."

- Club of Rome,

premier environmental think-tank,
consultants to the United Nations

Quote from the UN's Own "Agenda 21":

"Effective execution of Agenda 21 **will require a profound reorientation of all human society, unlike anything the world has ever experienced** a major shift in the priorities of both governments and individuals and an unprecedented redeployment of human and financial resources.

This shift will demand that a concern for the environmental consequences of every human action be integrated into individual and collective decision-making at every level."

The late Rosa Koire on Globalization and Agenda 21 (UN SDGs) implementation

**SUSTAINABLE
DEVELOPMENT GOALS**

...IN REALITY

End poverty in all its forms everywhere

More than 700 million people still live in extreme poverty on less than USD 1.90 a day. They struggle to fulfill the most basic needs (health, education, access to water and sanitation). Most of them – more than 400 million – live in sub-Saharan Africa. An estimated 71 million additional people around the world will be pushed into extreme poverty due to COVID-19, the first rise in global poverty since 1998.

Poverty affects developed countries as well. Right now, 30 million children are growing up poor in the world's richest countries.

Eradicating poverty in all its forms remains one of the greatest challenges facing humanity. While the number of people living in extreme poverty dropped by more than half between 1990 and 2015 – from 1.9 billion to 731 million – too many are still struggling for the most basic human needs.

PROOF OF IT'S SHOWING UP IN THE WORLD

Remember

Any type of government subsidy is a form of UBI:

Food Stamps

Obama Care- Subsidized Health Care

Gas Cards (coming soon)

Transportation Passes

These can and will give government control over your life by weaponizing the benefits for more control of your life in EVERY capacity.

End hunger, achieve food security and improved nutrition and promote sustainable agriculture

More than 750 million people suffer from hunger worldwide, the vast majority in developing countries. This number is expected to go up by over 100 million in 2020 alone due to COVID-19. Hunger and malnutrition are barriers to sustainable development because hungry people are less productive, more prone to disease, and less able to improve their livelihoods.

To nourish today's 750 million hungry people and the additional 2 billion people expected by 2050, a profound change of the global food and agriculture system is needed.

To end all forms of hunger and malnutrition by 2030 and ensure that all people – especially children – have access to sufficient and nutritious food all year round requires promoting sustainable agricultural practices such as supporting small scale farmers and allowing equal access to land, technology and markets.

International cooperation is also necessary to provide investment in infrastructure and technology that improves agricultural productivity.

2 ZERO HUNGER

2 UN-GMO GROWN & CONTROLLED FOOD AND FOOD SUPPLY,

The Benefits of World Hunger

We sometimes talk about hunger in the world as if it were a scourge that all of us want to see abolished, viewing it as comparable with the plague or aids. But that naïve view prevents us from coming to grips with what causes and sustains hunger. Hunger has great positive value to many people. Indeed, it is fundamental to the working of the world's economy. Hungry people are the most productive people, especially where there is a need for manual labour.

We in developed countries sometimes see poor people by the roadside holding up signs saying "Will Work for Food". Actually, most people work for food. It is mainly because people need food to survive that they work so hard either in producing food for themselves in subsistence-level production, or by selling their services to others in exchange for money. How many of us would sell our services if it were not for the threat of hunger?

About the author

George Kent

George Kent is a professor in the Department of Political Science at the University of Hawaii. He works on human rights, international relations, peace, development and environmental issues, with a special focus on nutrition and children. He has written several books, the latest is Freedom from Want: The Human Right to Adequate Food.

3 **GOOD HEALTH
AND WELL-BEING**

Ensure healthy lives and promote well-being for all at all ages

Despite great strides in improving people's health in recent years, inequalities in health care access still persist. The COVID-19 pandemic is throwing progress even further off track. More than five million children die before their fifth birthday every year. 16,000 children die each day from preventable diseases such as measles and tuberculosis. Every day, hundreds of women die during pregnancy or from child-birth related complications.

These deaths can be avoided through prevention and treatment, education, immunization campaigns, and sexual and reproductive healthcare.

The Sustainable Development Goals (SDGs) make a bold commitment to end the epidemics of AIDS, tuberculosis, malaria and other communicable diseases by 2030. The aim is to achieve universal health coverage, and provide access to safe and affordable medicines and vaccines for all.

3 GOOD HEALTH AND WELL-BEING

3 CRADLE-TO-GRAVE MANDATORY HEALTH CARE, & VACCINES

Universal Health Care

**A system that grants access to
healthcare to all residents or citizens of a
country or region**

Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

Enormous progress has been made in achieving the target of universal primary education with 91 percent enrollment in 2015. However, 258 million children and youth of age 6 to 17 were still out of school in 2018 and more than half of children and adolescents are not meeting minimum proficiency standards in reading and mathematics. In 2020, as schools closed due to COVID-19, an estimated 90 percent of all students were out of school, with at least 500 million of those left without access to distance learning options.

In addition to free primary and secondary schooling for all boys and girls by 2030, the aim is to provide equal access to affordable vocational training, eliminate gender and wealth disparities, and achieve universal access to quality higher education.

Education is the key that will allow many other Sustainable Development Goals (SDGs) to be achieved. When people are able to get quality education they can break from the cycle of poverty.

Education helps to reduce inequalities and to reach gender equality. It also empowers people everywhere to live more healthy and sustainable lives. Education is also crucial to fostering tolerance between people and contributes to more peaceful societies.

4 QUALITY EDUCATION

4 FREE PRE-K TO COLLEGE GOV'T & DUMBED DOWN EDUCATION, TEACH FALSE HISTORY, NO FREE THINKING

PROOF OF IT'S SHOWING UP IN THE WORLD

Federal Oversight

The federal government is responsible for four basic functions in public education today, according to the [U.S. Department of Education](#) website. Those four functions include:

- ***Policies related to Education Funding*** – These policies can promote certain education reform, by offering additional funding to states and districts that choose to abide by federal standards. [EdSource](#) explains that the current administration is attempting to do just that, by offering competitive grants through the Race to the Top program. States that fall in line with [Race to the Top](#) standards and recommendations stand to receive additional funding from Uncle Sam.
- ***Collection of Data and Research*** – This information is used to identify the strengths and weaknesses in the current state of public education today. By identifying weaknesses in public education, states can draft new policies to close the gaps and improve education quality overall.
- ***Identification of Problems in Education at the National Level*** – By shining the light on learning gaps and other problems in the education system, the federal government encourages states to take action sooner, rather than later.
- ***Enforcement of Discrimination Laws*** – The federal government is responsible for ensuring every child in America receives the same quality of education, regardless of gender, disability, location or income level.

A black and white close-up portrait of Maurice Strong, an older man with a serious expression, wearing a dark suit jacket, a white shirt, and a patterned tie. The background is a plain, light-colored wall.

**“Isn’t the only hope for
the planet that the
industrialized
civilizations collapse?
Isn’t it our responsibility
to bring that about?”**

**– Maurice Strong, founder
of the UN Environment
Programme**

Achieve gender equality and empower all women and girls

Women and girls represent half of the world's population and therefore also half of its potential. But gender inequality persists everywhere and stagnates social progress.

On average, women in the labor market still earn 23 percent less than men globally. On average, women spend about three times as many hours in unpaid domestic and care work as men.

Sexual violence and exploitation, the unequal division of unpaid care and domestic work, and discrimination in public office, all remain huge barriers. All these areas of inequality have been exacerbated by the COVID-19 pandemic: there has been a surge in reports of sexual violence, women have taken on more care work due to school closures, and 70% of health and social workers globally are women.

As of 2014, 143 countries have guaranteed equality between men and women in their constitutions, but 52 have yet to take this step. 

Gender equality is not only a fundamental human right, but a necessary foundation for a peaceful, prosperous and sustainable world.

Maxim of Law

**He who Creates,
CONTROLS**

Ensure availability and sustainable management of water and sanitation for all

Access to water, sanitation and hygiene is a human right. Yet billions are still faced with daily challenges accessing even the most basic of services.

Water scarcity affects more than 40 percent of the world population and is projected to increase with the rise of global temperatures as a result of climate change.

Globally, 3 in 10 people lack access to safely managed drinking water services. And 6 in 10 people lack access to safely managed sanitation facilities, leaving an estimated 3 billion people without basic handwashing facilities at home, a critical need to prevent infection and contain the spread of COVID-19.

Investments in infrastructure and sanitation facilities; protection and restoration of water-related ecosystems; and hygiene education are among the steps necessary to ensure universal access to safe and affordable drinking water for all by 2030.

6 CORPORATE MONOPOLIES TO CONTROL ALL WATER USING INFRASTRUCTURE PROJECTS FOR \$

The World Bank recently adopted a policy of water privatization and full-cost water pricing. The World Bank's policy of privatizing the world's water supply conveniently coincides with the United Nations Agenda 21.

Agenda 21 is actively promoting the privatization for the world's water supplies through a "water for profit" scheme. "...*(i) At the lowest appropriate level, delegation of water resources management, generally, to such a level, in accordance with national legislation, including decentralization of government services to local authorities, private enterprises and communities...*" (United Nations Environment Program, 2007).

Quote by UN's Commission on Global Governance:

"Regionalism must precede globalism. We foresee a seamless system of governance from local communities, individual states, regional unions and up through to the United Nations itself."

7 **AFFORDABLE AND
CLEAN ENERGY**

Ensure access to affordable, reliable, sustainable and modern energy for all

Our everyday life depends on reliable and affordable energy. And yet the consumption of energy is the dominant contributor to climate change, accounting for around 60 percent of total global greenhouse gas emissions.

From 2000 to 2018, the proportion of the global population with access to electricity has increased from 78% to 90%. In the least developed countries, that proportion has more than doubled during the same period. And yet, there are still about 789 million people around the world with no access to electricity.

Ensuring universal access to affordable electricity by 2030 means investing in clean energy sources such as solar, wind and thermal. Expanding infrastructure and upgrading technology to provide clean energy in all developing countries is a crucial goal that can both encourage growth and help the environment.

Dixy Lee Ray- Former Governor of Washington State

8 **DECENT WORK AND
ECONOMIC GROWTH**

Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

Globally, labour productivity has increased and the unemployment rate has decreased. However, more progress is needed to increase employment opportunities, especially for young people, reduce informal employment and labour market inequality (particularly in terms of the gender pay gap), promote safe and secure working environments, and improve access to financial services to ensure sustained and inclusive economic growth.

The global unemployment rate in 2019 was 5%, down from 6.4% in 2000. However, COVID-19 could cause the equivalent of 400 million job losses in 2020, depending on the policy measures adopted.

The pandemic will have a particularly adverse impact on workers in the informal economy, where an estimated 1.6 billion workers risk being impacted.

A persistent lack of decent work opportunities, insufficient investments and under-consumption contribute to the erosion of the basic social contract: that all must share in progress. The creation of quality jobs remain a major challenge for almost all economies.

9 **INDUSTRY, INNOVATION
AND INFRASTRUCTURE**

Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

Some progress has been made in the manufacturing industry.

The global share of manufacturing value added in Gross Domestic Product (GDP) increased from 15.2 percent in 2005 to 16.5 percent in 2018.

However, the share of manufacturing in Least Developed Countries remains low, posing a serious challenge to the target of doubling industry's share of GDP by 2030.

Global manufacturing slowed in both developing and developed regions in 2018-19, mainly attributed to emerging trade and tariff barriers that constrain investment and future growth and has plummeted in 2020 as a result of the pandemic.

While global internet coverage has expanded widely, as of 2019 46% of the global population still does not use the internet.

Investments in infrastructure – transport, irrigation, energy and information and communication technology – are crucial to achieving sustainable development and empowering communities in many countries.

Quote by UN's Commission on Global Governance:

"The concept of national sovereignty has been immutable, indeed a sacred principle of international relations. It is a principle which will yield only slowly and reluctantly to the new imperatives of global environmental cooperation."

Reduce inequality within and among countries

Income inequality is on the rise – particularly within countries. As of 2017, the richest 10 percent earn at least 20 percent of total global income. The poorest 40 percent earn less than 25 percent of total global income.

On average, and taking into account population size, inequality has increased by 11 percent in developing countries between 1990 and 2010.

Inequality threatens long-term social and economic development, harms poverty reduction and destroys people's sense of fulfillment and self-worth.

To reduce inequality, policies should be universal and pay special attention to the needs of disadvantaged and marginalized populations, which will be disproportionately affected by the economic impacts of COVID-19.

10 REDUCED INEQUALITIES

The World Is Failing In Both Energy Affordability And Climate Goals

📅 June 25, 2022 👤 admin 👁 16 Views 💬 0 Comments

🔍 [affordability](#) [alex](#) [authored](#) [both](#) [climate](#) [energy](#) [failing](#) [goals](#) [kimani](#) [world](#)

The World Is Failing In Both Energy Affordability And Climate Goals

Authored by Alex Kimani via OilPrice.com,

- Global energy investment is forecast to rise by 8 percent to \$2.4 trillion this year.
- Investment in renewables is rising, but it's nowhere near the levels necessary to limit global warming within a 1.5 degrees Celsius increase.
- IEA: Inflation has brought the first increases in the cost of renewables in a decade.
- U.S. shale spending remains far below 2019 levels in 2022.

Global energy investment is on the rise and expected to grow by 8 percent annually this year, pushed up by record spending on clean energy, the International Energy Agency (IEA) said in its new report World Energy Investment 2022.

Make cities and human settlements inclusive, safe, resilient and sustainable

Half of the world's population live in cities. By 2050, 6.5 billion people – two-thirds of humanity – will live in urban areas.

In the developing world, the rapid growth of cities, along with the increasing rural to urban migration, has led to a boom in mega-cities. In 1990, there were ten mega-cities with 10 million inhabitants or more. In 2014, there are 28 mega-cities, home to a total of 453 million people. This rapid urbanization outpaces the development of housing, infrastructure and services, which led to a rise in the share of the urban population living in slums – 24 percent in 2018.

As the COVID-19 pandemic has made clear, sustainable development cannot be achieved without significantly transforming the way urban spaces are built and managed.

Making cities safe and sustainable means ensuring access to safe and affordable housing, upgrading slum settlements, investing in public transport, creating green spaces, and improving urban planning and management in a way that is both participatory and inclusive.

11 DRIVE ALL INTO PACKED, CONTROLLED & SURVEILLED AREAS. RESTRICT RURAL LIVING

PROOF OF IT'S SHOWING UP IN THE WORLD

Smart cities add digital intelligence to the urban world and use it to solve public problems and achieve a higher quality of life.

3 layers of "smartness" will elevate life in cities of the future

12 RESPONSIBLE
CONSUMPTION
AND PRODUCTION

Ensure sustainable consumption and production patterns

If the global population reaches 9.8 billion by 2050, the equivalent of almost three planets will be required to provide the natural resources needed to sustain current lifestyles.

In 2015, almost 12 tonnes of resources were extracted per person, with electronic waste as the fastest-growing sector. This means that production, consumption, and natural resources must be managed better and differently.

The world's ecological footprint should be reduced by changing the way goods and resources are produced and consumed.

Shared natural resources should be managed efficiently and toxic waste and pollutants disposed of carefully.

Support should be provided to developing countries to move towards more sustainable patterns of consumption by 2030.

Thus in setting an American agenda
for a New World Order, we must
begin with a profound alteration in
traditional thought.

— *Joe Biden* —

AZ QUOTES

13 CLIMATE
ACTION

Take urgent action to combat climate change and its impacts

Climate change affects every country on every continent. It is caused by human activities and threatens the future of our planet. With rising greenhouse gas emissions, climate change is occurring at rates much faster than anticipated and its effects are clearly felt world-wide.

The impacts include changing weather patterns, rising sea level, and more extreme weather events. The year 2019 was the second warmest on record, bringing with it massive wildfires, hurricanes, droughts, floods and other climate disasters. If left unchecked, climate change will undo a lot of the progress made over the past years in development. It will also provoke mass migrations that will lead to instability and wars.

Affordable, scalable solutions are now available to enable countries to leapfrog to cleaner, more resilient, and low-carbon economies.

Climate change is a global challenge that requires coordinated international cooperation.

Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Oceans cover three-quarters of the Earth's surface, contain 97 percent of the Earth's water, and represent 99 percent of the living space on the planet by volume.

The world's oceans provide key natural resources including food, medicines, biofuels and other products; help with the breakdown and removal of waste and pollution; and their coastal ecosystems act as buffers to reduce damage from storms.

Today more than 30 percent of the world's fish stocks are overexploited, and marine pollution is reaching alarming levels, with an average of 13,000 pieces of plastic litter to be found on every square kilometer of ocean.

Careful management of this essential global resource is a key feature of a sustainable future.

Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, halt and reverse land degradation, and halt biodiversity loss

Plant life provides 80 percent of the human diet, and agriculture is an important economic resource and means of development.

Forests cover more than 30 percent of the Earth's surface, but 7 million hectares of forests are being lost every year while the persistent degradation of drylands has led to the desertification of close to 4 billion hectares.

Of the 8,300 animal breeds known, 8 percent are extinct and 22 percent are at risk of extinction.

Wildlife trafficking also disrupts ecosystems and contributes to the spread of infectious diseases, such as COVID-19.

Halting deforestation and restoring the use of terrestrial ecosystems is necessary to reduce the loss of natural habitats and biodiversity which are part of our common heritage.

““ The common enemy of humanity is man. In searching for a new enemy to unite us, we came up with the idea that pollution, the threat of global warming, water shortages, famine and the like would fit the bill. ...The real enemy then is humanity itself.”“

Aurelio Peccei

First President of the Club of Rome

16 PEACE, JUSTICE
AND STRONG
INSTITUTIONS

Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

People everywhere should be free of fear from all forms of violence and feel safe as they go about their lives whatever their ethnicity, faith or sexual orientation.

High levels of armed violence and insecurity have a destructive impact on a country's development.

Sexual violence, crime, exploitation and torture are prevalent where there is conflict or no rule of law, and countries must take measures to protect those who are most at risk.

Governments, civil society and communities need to work together to find lasting solutions to conflict and insecurity. Strengthening the rule of law and promoting human rights is key to this process, as is reducing the flow of illicit arms, combating corruption, and ensuring inclusive participation at all times.

HEGLAIAN DIALECTIC

PROBLEM-REACTION-SOLUTION

**17 PARTNERSHIPS
FOR THE GOALS**

Strengthen the means of implementation and revitalize the global partnership for sustainable development

The 2030 Agenda for Sustainable Development is universal and calls for action by all countries – developed and developing – to ensure no one is left behind. It requires partnerships between governments, the private sector, and civil society.

The Sustainable Development Goals can only be realized with a strong commitment to global partnership and cooperation.

Significant challenges remain: official development assistance is declining; private investment flows are not well aligned with sustainable development; there continues to be a significant digital divide; and there are on-going trade tensions.

To be successful, everyone will need to mobilize both existing and additional resources, and developed countries will need to fulfill their official development assistance commitments.
